

This Workshop

By Nick Del Grosso

Why Did You Decide to Do a PhD?

“I Decided to do a PhD because I...”

What Gives You Motivation at Work?

“I am motivated when...”

“Being Motivated
Implies that you
love your job,
literally.”

Motivated Groups Have:

- **Reasonable Working Conditions**
 - Ensured laboratory safety
 - Adequate space
 - Available required equipment
- **Competent People Trained Appropriately for their Job**
- **Assurance of the Link Between Effort and Outcomes**
 - Must believe that their effort will lead to desired job performance
 - Must believe this performance will lead to certain outcomes
 - Must value those outcomes
- **Equity and Fairness**
 - Treated and Paid Fairly, as compared with similar organizations
- **Appropriate Challenge**
 - Should not be asked to perform the impossible
 - Should be encouraged to go beyond what they initially see as their limits

David McClelland's 3 Work-Related Needs

- **Power:** A Desire to Have an Impact on People
 - titles, activity to influence or inspire, concern with organizational action or success, career position and prestige, strategy
- **Achievement:** A Concern for Doing Things Better
 - Numbers, Means-end Statements, winning, doing as well or better than another, concern with how well a task is being performed
- **Affiliation:** A Concern for Establishing Positive Affective Relationships
 - Friends, emotions about relationship, helping, positive response from another

I'd like to discuss Bayes' Rule today...

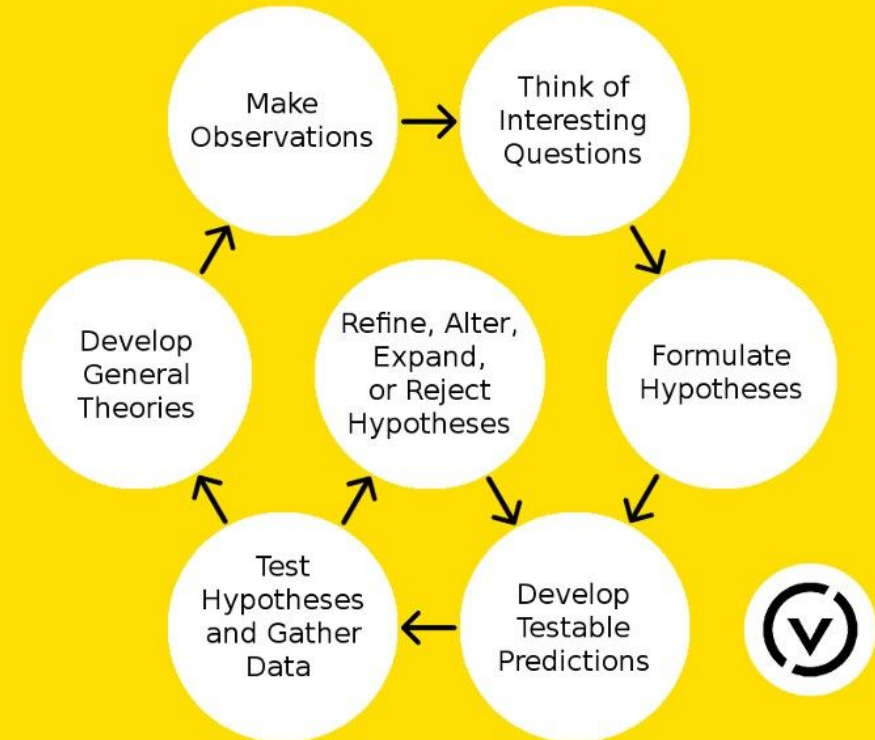

$$P(A \mid B) = \frac{P(B \mid A) P(A)}{P(B)}$$

Bayes' Rule can be applied iteratively to gain knowledge.

(Mossman et al, 2014)

THE SCIENTIFIC METHOD AS AN ONGOING PROCESS

The Venus Project advocates a world where science is applied to the social system. Find out how this will uplift humanity.

THE VENUS PROJECT
BEYOND POLITICS POVERTY AND WAR
www.thevenusproject.com

...But will people use actually Bayes' if I teach it here?
(low impact motivation)

And that reminded me of something I ***do*** use, all the time...

“Tech Primers: What is TDD?”

<https://i.ytimg.com/vi/T38L7A0xP-c/maxresdefault.jpg>

and that reminded me of something...

Electrical Stimulation in Barrel
Cortex”

(Aronoff et al, 2010)

EEG- Robot BCI

(Ramos et al, 2014)

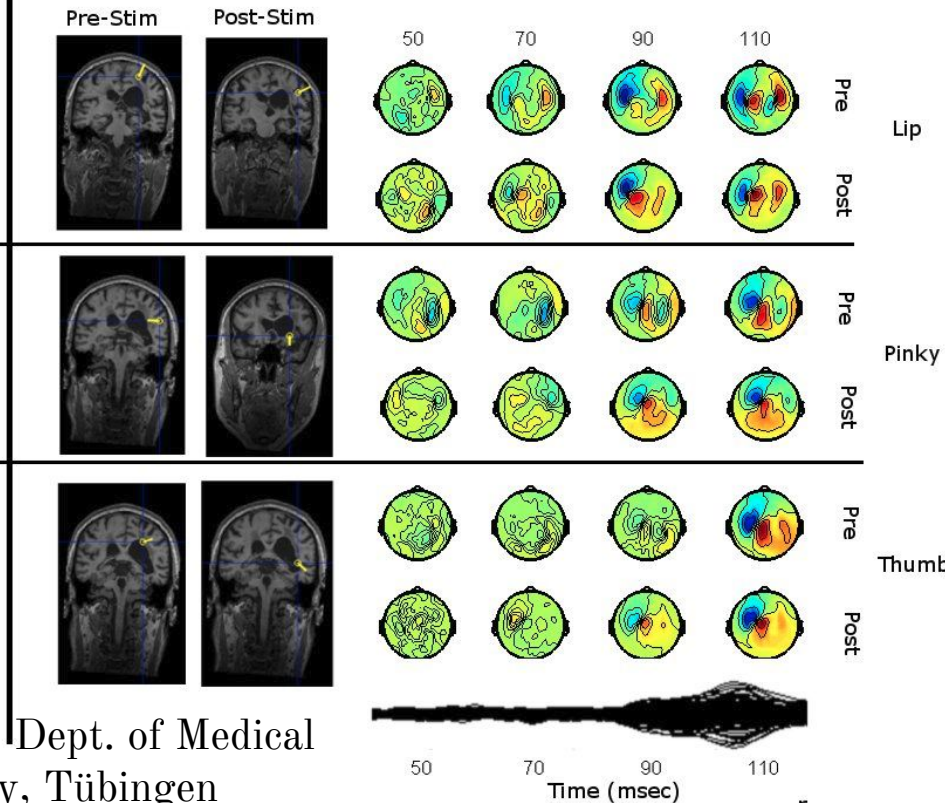

My Master's Thesis: "Neuroplasticity in the Recovering Hemiparetic Stroke Patient"

Healthy (Right) Side Stimulation

Paretic (Left) Side Stimulation

Birbaumer Lab, Dept. of Medical
Psychology, Tübingen

Physiotherapy Enhancement through Rich Experiences

(Broetz et al, 2014)

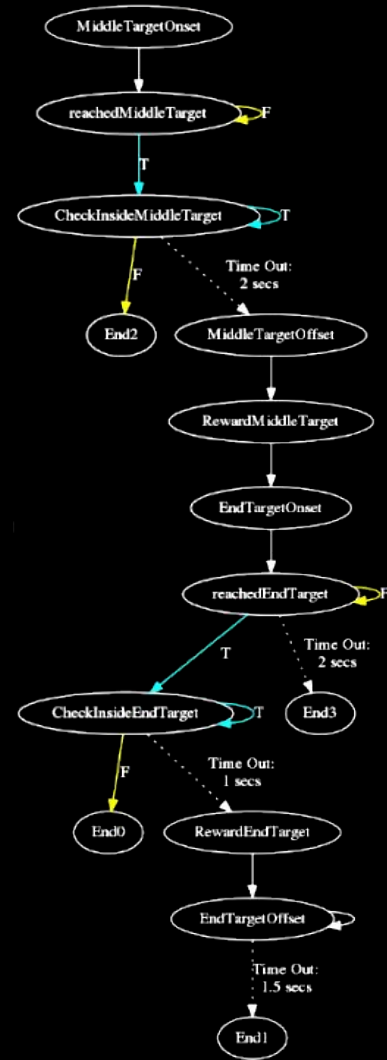

Uniform Vs Geometric Distribution

2013-2014: HippoVR

Input Lag: 120 msecs

2016: The ratCAVE VR Setup

2018: Preventing
VR Sickness

In Summary:

I am very interested in the importance of closed loops in sensorimotor research.

I have also not published much.

Publish or perish

From Wikipedia, the free encyclopedia

This article is about the concept in literature. For the Columbo episode, see [Columbo \(season 3\) § Episodes](#).

"**Publish or perish**" is a phrase coined to describe the pressure in [academia](#) to rapidly and continually [publish](#) academic work to sustain or further one's career.^{[1][2][3]}

Frequent publication is one of the few methods at scholars' disposal to demonstrate academic talent. Successful publications bring attention to scholars and their sponsoring institutions, which can facilitate continued funding and an individual's progress through a chosen field. In popular academic perception, scholars who publish infrequently, or who focus on activities that do not result in publications, such as instructing [undergraduates](#), may lose ground in competition for available tenure-track positions. The pressure to publish has been cited as a cause of poor work being submitted to [academic journals](#).^[4] The value of published work is often determined by the prestige of the academic journal it is published in. Journals can be measured by their [impact factor \(IF\)](#), which is the average number of citations to articles published in a particular journal.^[5]

See also [[edit](#)]

- [Academic careerism](#)
- [Forced ranking](#)
- [Impact factor](#)
- [Least publishable unit](#), reduction to which is often disparagingly labeled "[salami slicing](#)"
- [Slow science](#)

Essay

Why Most Published Research Findings Are False

John P. A. Ioannidis

I Think This
Isn't News to
Most of Us

Burnout:

What happens when your work-related needs aren't met for a long time.

"Burnout is a psychological syndrome of

- **emotional exhaustion**
- **reduced personal accomplishment**
 - may feel unhappy with oneself
 - feel dissatisfied with accomplishments on the job
- **depersonalization**
 - negative, cynical attitudes and feelings
 - dehumanized perception of others

(Maslach et al, 1996)

Discussion

1. What proportion of time in a representative week do you spend doing things that match your listed work motivations?
2. Do you feel effective, competent, creative, and valued?
3. How likely is it that someone in your group will experience burnout during their PhD?
4. What percent of people in your department do you think are *currently* burned out?
5. Is this having an impact on your research?

YOU WERE SO PREOCCUPIED WITH WHETHER OR NOT YOU COULD

YOU DIDN'T STOP TO THINK IF YOU SHOULD

From the authors of *The Visible Ops Handbook*

The Phoenix Project

A Novel About IT, DevOps,
and Helping Your Business Win

Gene Kim, Kevin Behr, and George Spafford

Lean Product and Process Development

SECOND EDITION

by ALLEN C. WARD
and DURWARD K. SOBEK II

Pro Book

Proven Recipes for Data

From the authors of *The Visible*

...and that's how I came up with this workshop:

Productivity in Science

Probability Theory, Test-Driven Development, and
Lean Management Principles, presented by Nick Del Grosso

Proposal: Let's Embrace “Publish or Perish”

Publish or Perish? Yes. Embrace It.

That academic mantra doesn't have to be a threat, or a gloomy mandate to live or die under

Drew Coffman / Creative Commons

Research Outputs

- **Knowledge**
 - Theoretical Models
 - Important Insights
 - Experimental Methods
 - Intellectual Property (e.g. Patents)
- **Data**
 - Experimental Data
 - Simulation Data
- **...and combinations of Both.**

Motivation:

To be accomplished researchers doing impactful research in an engaging, innovative, and positive research community.

Goal: To Regularly Publish
High-Impact, High-Quality
Research

“Lean Research” = Lean Development + Lean Operations

Lean Product Development

- Produces Knowledge
- Produces Operational Value Streams

Lean Manufacturing Operations

- Produces Products

Lean Methodologies
focus on Increasing Productivity
by Minimizing Waste

p(Success): What is your Project Risk?

- Independent Probabilities can be multiplied.
 - ▷ $p(\text{My Animals Surviving Surgery}) = 0.9$
 - ▷ $p(\text{My Animals Learning the Task}) = 0.8$
 - ▷ $p(\text{Both}) = 0.9 * 0.8 = 0.72$
- Task: estimate the total risk of each of your projects.

Lead Time: Can You tolerate this risk?

Lead time is the sum of four periods:

1. **Reaction time**, between the opportunity appearing and the company deciding to invest.
2. **Exploration time**, during which the team explores multiple alternative implementations (and knowledge-value is efficiently added).
3. **Lock-in time**, during which only a single solution is detailed.
4. **Fix-up time**, during which the company tries to deal with the problems of the solution.

The Applicability of Lean and Six Sigma Techniques to Clinical and Translational Research

Authors: S. Schweikhart, A. Dembe

View research catalog entry for this paper

Journal: *Journal of Investigative Medicine*

Year: 2009

Volume: 57

Issue: 7

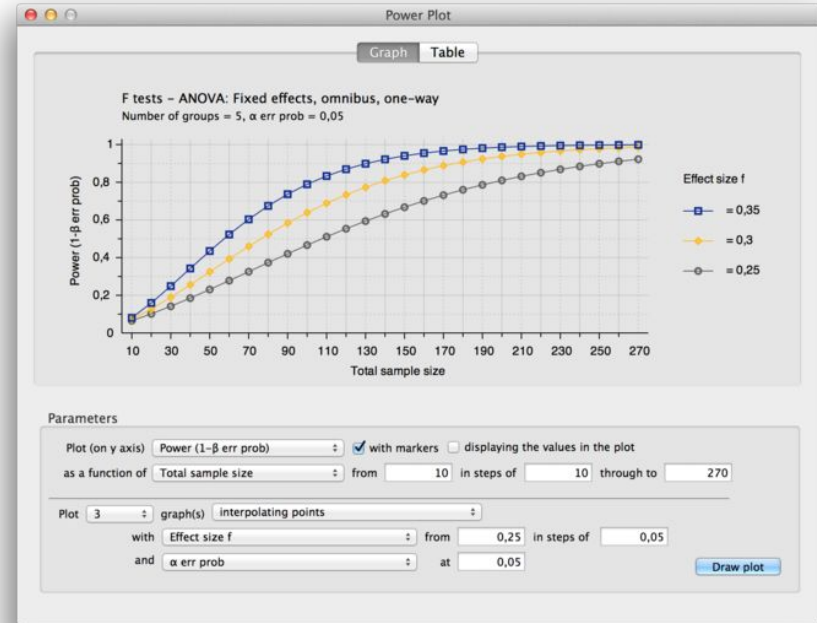

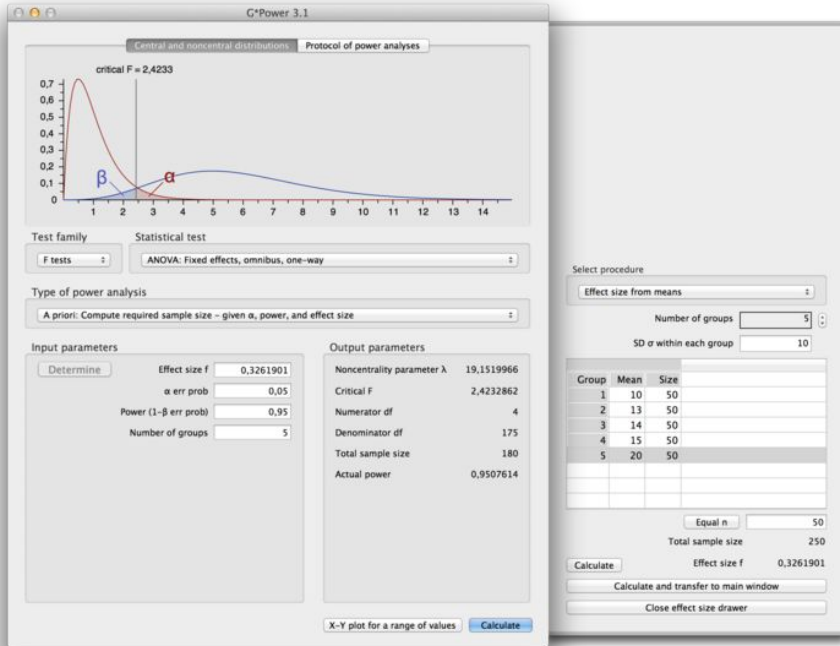

Pages: 748-755

Abstract:

BACKGROUND: Lean and Six Sigma are business management strategies commonly used in production industries to improve process efficiency and quality. During the past decade, these process improvement techniques increasingly have been applied outside the manufacturing sector, for example, in health care and in software development. This article concerns the potential use of Lean and Six Sigma in improving the processes involved in clinical and translational research. Improving quality, avoiding delays and errors, and speeding up the time to implementation of biomedical discoveries are prime objectives of the National Institutes of Health (NIH) Roadmap for Medical Research and the NIH's Clinical and Translational Science Awa...

Estimate Needed Sample Size with Power Analyses

Present Your Plans Early and Aggressively Search for Failure Points

Insights from Learning-Centered Teaching: Knowledge Distribution Must be Goal-Focused

- **Journal Clubs:**

- ▷ Training of Critical Thinking and Reading Skills

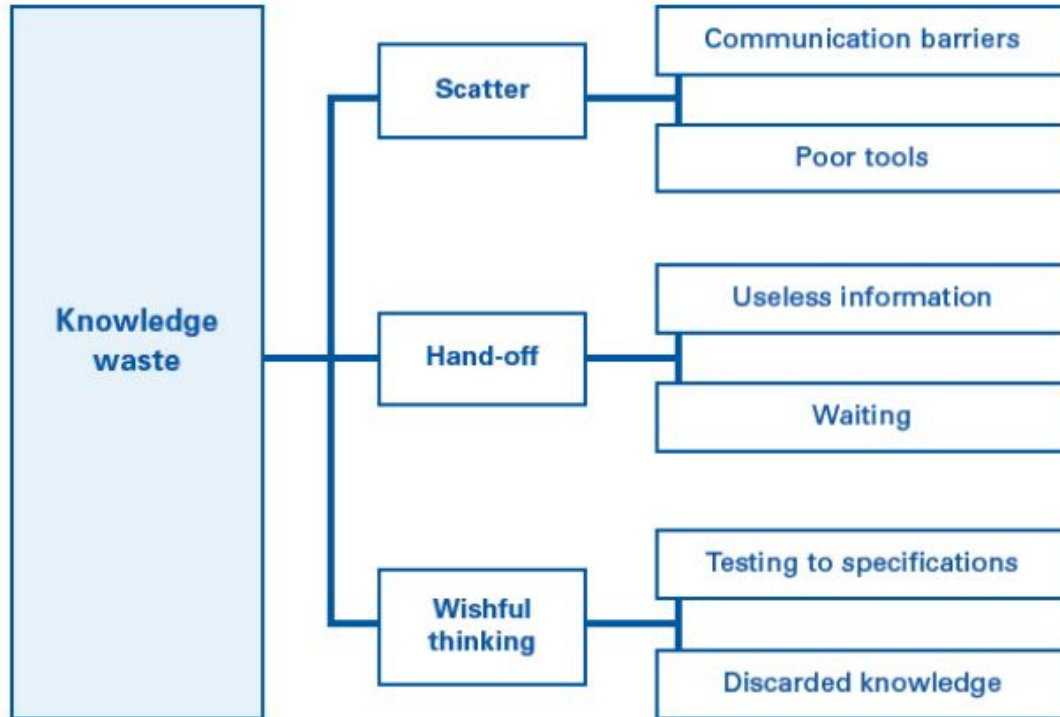

- **Progress Reports:**

- ▷ Identification of failure points and deviation estimation from target product

- **Conferences / Talks:**

- ▷ Impact scientists by changing their behavior (use your methods, cite your work, work in your field, hire you for positions, give you resources)

But Stay Efficient: Beware of Knowledge Waste

Lean Management is Sometimes Unintuitive, Often Unconventional

	Situation	Conventional response	Scatter effect	Lean response
1	Things are going badly	Reorganize	Obsoletes interaction knowledge	Find and fix root cause
2	The project is falling behind	Add more developers to the team	Disrupts communication	Supervisors pitch in
3	The purchasing agents are slow finding suppliers	Call them more often	Distracts purchasing	Find and fix root cause
4	We keep having product failures	Add more tasks and checks to the development process	Distracts developers	Find and fix root cause
5	The customer wants something new	Add a rush development project	Overloads resources, produces new failures	Steady drumbeat of innovation
6	We're having problems with the manufacturing system	Keep the manufacturing engineers on the project until the system is running properly	Manufacturing engineers not available for next project; problem repeats	Set-based concurrent engineering, rotation of people from plant on to the team.

Solutions for Minimizing Scatter (quoted from book)

- Stop Reorganizing
- Reduce demands for information on short notice from subordinates.
- Respond to “fires” with the least disruptive but effective response. If it is someone’s job to put out the fire, let them do it.
- Stop sending out or replying to excessive email or voice mail.
- Think twice about adding more projects.
- Stop adding format structure (tasks, checks, reports) to your development process.

**Eventually, you'll come to
a consensus...**

Bayes Demo Time!

Upon Consensus, Produce!

Produce either Knowledge or a Product

End of Part 1.
Break!

Beginning of Part 2.
Unbreak!

Lean Experiments: Lessons from Toyota and DevOps

Value-Stream Mapping: Visualizing Lead Time

- **Exercise:** Make an experiment value stream map, using an example from your laboratory or department.

<http://www.johngoodpasture.com/2015/11/value-stream-mapping.html>

Lean Operations Minimize Waste

Brainstorming Exercise: Identify as many sources of wasted time in this value stream map as possible.

Feel free to adjust the value stream map if you see places to add more detail.

Lean Operations Minimize Waste

1. **Waste of Overproduction:** creating things that don't add value
2. Waste of Time on Hand / Waiting
3. Waste of Transportation
4. Waste of Processing Itself
5. Waste of Stock at Hand
6. Waste of Movement
7. Waste of Making Defective Products
8. Waste of Underutilized Workers

Lean Operations Minimize Waste

Brainstorming Exercise: Identify as many sources of wasted time in this value stream map as possible.

Feel free to adjust the value stream map if you see places to add more detail.

“The First Way”

Create a Constant Feed-Forward Flow

- Waste is Often Spent Waiting.
 - ▷ High “Work in Progress”
 - ▷ Ignoring this aspect creates a Push System
 - ▷ Wastes Effort, Decreases Responsiveness of System

“The First Way”

Create a Constant Feed-Forward Flow

- ▶ **Exercise:** Pushing and Pulling Paper Airplanes

“The First Way”

Create a Constant Feed-Forward Flow

- ▶ Toyota's Solutions
 - ▶ “Andel Cords/Buttons”
 - ▶ “Swarming” Problems
 - ▶ Slack Time
 - ▶ Decrease Batch Size
 - ▶ Kanban Boards

- ▶ **Discussion:** How can we apply this to our research?

KanBans: Keeping Your Value Stream Visible

Trello.com Example: PyData Munich Org Team

The screenshot displays a Trello board for the PyData Munich Org Team, organized into six columns representing different stages of event planning. The first column is a list of event templates. The subsequent columns show cards for specific events at various stages, with details like dates, locations, and team members visible on the cards.

- Column 5: Event Space Needs Final Confirmation, Meetup Event needs Announcement**
 - + Add a card
- Column 6: Speakers Need Second Rehearsal**
 - October 2nd Event at Burda Bootcamp
 - + Add another card

Note: Flow in Psychology seems somehow related to me

Flow theory (psychology) postulates three conditions that have to be met to achieve a flow state:

1. One must be involved in an activity with a clear set of goals and progress. This adds direction and structure to the task. [\[14\]](#)
2. The task at hand must have clear and immediate feedback. This helps the person negotiate any changing demands and allows them to adjust their performance to maintain the flow state. [\[14\]](#)
3. One must have a good balance between the *perceived* challenges of the task at hand and their own *perceived* skills. One must have confidence in one's ability to complete the task at hand. [\[14\]](#)

Mental state in terms of challenge level and skill level, according to [Csikszentmihalyi's flow model](#). [\[9\]\[page needed\]](#) (Click on a fragment of the

(wikipedia entry on Flow)

“The Second Way” Maximize Flow with Feedback Systems

- Work that moves backwards:
 - ▷ Creates Unplanned Work.
 - ▷ Indicates unknown root problems
 - ▷ Increases Bottlenecks

“The Second Way” Maximize Flow with Feedback Systems

- ▷ Toyota’s Solutions:
 - ▷ Visual Indicators of Quality at all Work Stations
 - ▷ Single-Piece Flow
- ▷ Devops Solution:
 - ▷ Test-Driven Development
 - ▷ Version Control Systems
 - ▷ Minimally-Viable Product
 - ▷ Continuous Deployment
- ▷ **Discussion:** How can we apply this to our research?

Demo: Test-Driven Development

“ *The Third Way: Cultivate a Culture
of Experimentation and
Innovation.*

Conclusions

- We are motivated to be good researchers.
- Productive research creates research products.
- Finding innovative approaches requires thinking like a product developer.
- Committing to an experiment requires thinking like a manufacturer.
- Reducing waste is essential to being lean.
- Slack time is essential for productivity.
- Pull-feedback systems create smoother flow and higher quality.

Evaluation and Feedback:

1. Your Position (e.g. Master, PhD, Postdoc, PI)
2. How Much Did you Enjoy this Workshop? (1-10)
3. How Valuable is this Topic for You? (1-10)
4. How Engaged Were You? (1-10)
5. What things did you like about the workshop? (3-5 items)
6. What would you like to see Improved in a future workshop on this topic? (3-5 items)

**Thank you for your
attention!**
